

# RouteXL 7.2.3.0 Release Notes

## What's new?

- ✓ Latest program components and libraries.
- ✓ Added a new feature in Quantitative Vehicle Routing tool of RouteXL that allows you to precisely stagger visits to points that need to be visited multiple times over a certain period. See the “Frequency-Driven Multi-Visits” section of the [QVR User Guide](#) for more data.
- ✓ Better progress reporting.
- ✓ Improved status reporting on optimization in QVR.
- ✓ Ability to dump logs in detail of QVRW optimizations.
- ✓ Optimized memory and CPU usage in QVR optimization thus speeding up calculation.

## Fixed

- ✓ Various bugfixes.
- ✓ Fix clusters not being saved and restored properly in QVR.
- ✓ Fix error in Transportation Scheduling giving invalid index.
- ✓ Fix so that we do not stop all processing if one algorithm times out in QVR optimization.
